Thank you for downloading and paying interest in our research

The source codes are in the *project.zip* file. This is a Visual 2008 project solution.

The detailed results, settings files, and the compiled exe to run your own experiments are in *ResultsSettingsRuns.zip*.

To run an exemplary experiment:
1. Open the *<yourPath>\RunMeYourself\exmplary run* forlder.
2. In file *serie.txt*, you should put the appropriate path
3. Run HEFAN.exe and press the *Load all test files* button
4. The computation shall start

In the source code, you may find that there are other ways of experiment execution (non-manual).
